Problem Definition

This section should clarify what is the problem that is being investigated.

Solution Approach: Terms, Formulas and Definitoins

This should provide some theoretical background explaining the solution approach.

Analysis

This could have multiple sections:

Exploratory Analysis

Reading or generating data, and preliminary analysis of the data (summarizing and visualizing) should be included here.

Inferencial Analysis

Employing CI or Test of Hypothesis to extended the results from a sample to the population where the sample was obtained from.

Conclusion

Making conclusions that answer questions that the report was going to answer.
